VIROLOGY**SARS-CoV-2 (RNA Detection)**

(Viral RNA extraction and rRT-PCR amplification of 2 specific SARS-CoV-2 genes)

Sample **Nasopharyngeal Swab**Results **Negative**

A NEGATIVE result is reported when detection of at least two SARS-CoV-2 genes is negative. A POSITIVE result is reported when detection of at least two SARS-CoV-2 genes is positive. An INDETERMINABLE result is reported when, in the detection of at least two SARS-CoV-2 genes, a positive result is obtained only for one of the genes or a negative result is obtained for both genes and cumulatively a negative result is obtained in the detection of human RNA (control of harvest and extraction tests).

The Specialist in Laboratory Medicine,

Prof. Doutor Antonio Amorim
